

DJANGO REST FRAMEWORK (DRF)

1. Introduction to DRF
2. Purpose of DRF
3. JSON/XML
4. HTTP methods
5. Types of Web Services
6. Differences between SOAP and REST
7. Installation of Django Rest Framework
8. Prerequisites apps for DRF.
9. Advantages of DRF

WORKING WITHOUT REST FRAMEWORK

1. Json module methods: dump() and load()
2. Serialization
3. Mixins
4. Differences between Mixins and Multiple Inheritance
5. Working with “dumpdata” commands
6. HTTP Status codes
7. Disable csrf verification
8. Testing API through command prompt, partner application (python script) and Web API.
9. CRUD operations with http methods
10. CRUD operations with http methods with single end point

WORKING WITH REST FRAMEWORK

1. Serializers
2. Serialization
3. De-serialization
4. Validations
 - Field Level Validations
 - Object Level Validations
 - By using Validators
5. Django Rest Views
6. APIView
 - ListAPIView
 - CreateAPIView
 - RetrieveAPIView
 - UpdateAPIView
 - DestroyAPIView
 - ListCreateAPIView

- RetrieveUpdateAPIView
 - RetrieveDestroyAPIView
 - RetrieveUpdateDestroyAPIView
7. ViewSet
 8. ModelViewSet
 9. Mixins
 - ListModelMixin
 - CreateModelMixin
 - RetrieveModelMixin
 - UpdateModelMixin
 - DestroyModelMixin
 10. APIException - Handling Custom Exceptions
 11. Authentication
 - Basic Authentication
 - Session Authentication
 - Token Authentication
 - JWT(Json Web Token) Authentication
 - ✓ Access Token
 - ✓ Refresh Token
 - ✓ Verify Token
 12. Authorization
 - AllowAny
 - IsAuthenticated
 - IsAdminUser
 - IsAuthenticatedOrReadOnly
 - DjangoModelPermissions
 - DjangoModelPermissionsOrAnonReadOnly
 13. Custom Permissions
 14. Custom Authentication
 15. DRF -Pagination
 - PageNumberPagination
 - LimitOffsetPagination
 - CursorPagination
 16. Searching and Filtering
 17. Nested Serializers
 18. Embedding Django application with REST API
 19. Working with Postman Tool to Test API
 20. Fetching data from real time API with python script
